                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotides encoding human secreted proteins - derived from present sequence, kidney, foetal lung, placenta, testes, brain, or owary, pituitary, retina and colon cDNA libraries.

Claim 1; Page 266; 618pp; English.

The present sequence represents a human expressed sequence tag (EST). The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, hamantopolesis regulating activity, tissue growth activity, hamantopolesis regulating activity, tissue growth activity, hamantopolesis regulating activity, receptor/ligand activity, hamantopolesis regulating activity, receptor/ligand activity, hamantopolesis regulation activity, receptor/ligand activity, anti-inflammatory activity. activity. The polynucleotide may also be useful for gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PS Disclosure: Page 28-29; 54pp; English.

CC The nucleic acids v36481-v36487 encode a variety of partial

CC polynucleotides from the partial centrosomal protein 140 (CP140) cDNA.

CC The CP140 partial cDNA was found by standard cloning and screening

CC The 1.7 kb cDNA was sequence was then subcloned into a Bluescript vector.

CC The 1.7 kb cDNA was sequenced and analysed and it was found that this

CC partial sequence contained one continous open reading frame. The

CC partial sequence contained one continous open reading frame. The

CC plynucleotides and polypeptides (W61170-W61175) can be used as a

CC diagnostic method for screening a patient for the presence of anti-CP140

CC autoantibodies as an indication of sclerotic disease. This can be

CC performed by taking a sample from the patient, adding to this a pure

CC cP140 fragment, and then seeing if any antibodies present will bind the

CC CP140 fragment. If any complexes are detected, it indicates that the

CC cp140 fragment is probably suffering from sclerotic disease.

                                                         The present sequence encodes a Helicobacter pylori cytoplasmic protein involved in genome replication, transcription, recombination and repair. The protein may be used in a voccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      H. pylori cytoplasmic protein ORF 34574062.aa.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Proceedings of the secretal lung, placenta, testes, brain, provery, pituitary, retina and colon cDNA libraries

Provary, pituitary, retina and colon cDNA libraries

Crossina sequence represents an expressed sequence tag (EST), and is

Crossina sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and colon suppressing activity, immune stimulating or suppressing activity, haematory conditions in the suppressing activity, haematory conditions in colon to the colon suppression activity, haematory conditions in colon to the colon suppression activity, the colon suppression activity, the colon suppressor activity the colon suppressor acti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match 100.0%;

                                                               CC A single-stranded DNA (or its complementary strand or the corresp. CC double-stranded DNA) which comprises one of the 7837 "GS" sequences CC given in T19001-T26837 and which is able to hybridise to part of CC human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) CC sequences were obtained from 3'-directed cDNA libraries prepared CC from various human tissues; synthesis of cDNA was initiated from the C3'-enc of mRNA by using polly(T) as the sole primer. Since the 3'-CC untranslated sequence is unique to a particular mRNA species, almost CC all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library CC is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be C determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PT e.g. human blood, kidney, foetal lung, placenta, testes, brain, provary, pituitary, retina and colon cDNA libraries
Claim 1; Page 515; 641pp; English.
CT he present sequence represents an expressed sequence tag (EST), and is care all secreted EST sequences isolated from a variety of human tissue courses. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for canimals, although no supporting data is given. Suggested activity, immune stimulating or suppressing activity, haematopolesis regulating activity, tissue growth activity, haemostatic and thrombolytic activity, receptor/ligand activity, haemostatic and thrombolytic activity, receptor/ligand activity, tumour invasion suppressor activity, tumour inhibition activity, them suppressor activity, themetactivity, anti-inflammatory activity. The EST sequences are also stated to be useful for gene

casseties were created by using the sequences represented by T15983-T15987 as amplification primers, and used to randomise the region coding the trypsin-inhibitory loop of pSKAN8. The products of these phagemids can be used to isolate phagemid particles with strong binding characteristics for defined target molecules, such as proteases (e.g. alpha-chymotrypsin or elastase). The phagemid particles can then be used to isolate protein ligands. The phagemid banks present a combined
                                                                                      Phagemid display banks expressing a fusion of a ligand and a fillamentous DNA bacteriophage protein - have defined target molecules such as protease(s), e.g. alpha-chymotrypsin or elastase example; Fig 1c; 19pp; English.

T15982 and T35865 represent fragments of the phagemid vector pSKAN8. T15982 and T35865 represent fragments of the phagemid vector pSKAN8. T15982 and T35865 represent fragments pancreatic secretory trypsin inhibitor (hPSTI) gene and the M13 pIII protein gene. In order to creat a randomised phagemid bank from pSKAN8, expression cassettes containing NNK repeats were created and inserted into pSKAN8. The expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; hPSTI; pancreatic secretory trypsin inhibitor; pIII protein; protease; vaccine; trypsin-inhibitory loop; alpha-chymotrypsin; elastase; antigen; M13; ss.

                                                                                                                                     B
                                                                                                                                                                                                                                                                                  Disclosure; Fig 1d; 98pp; English.

Disclosure; Fig 1d; 98pp; English.

This is the nucleotide sequence of subcloned fragment psgB23sp6 of the human uncoupling protein-2 (UCP2) gene present in genomic clone hUCP2-g1 (I-806). 10 subcloned fragments (see V44629-38) of hUCP2-g1 are provided. hUCP2-g1 was isolated from a human placenta genomic DNA library constructed in EMBL3 phage using mouse UCP2 cDNA as probe. psgB23sp6 is a non-localised fragment of the gene. The human UCP2 gene maps to a chromosomal region (11q13) linked to obesity and hyperinsulinaemia. The invention provides methods for the treatment of disorders associated with diminished or elevated UCP2 expression or activity. An agent which enhances UCP2 expression (e.g. an expression construct comprising a UCP2 encoding sequence) can be used to treat obesity, diabetes, syndrome X, hypothermia, hyperinsulinaemia, or glucose intolerance. An inhibitor of UCP2 (e.g. an antisense construct) is used to treat wasting, anorexia, inflammation, cachexia, fever or hyperthermia (all claimed). The invention also relates to diagnostic and drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Ma

PT DNA sequences representing aberrant forms of human high mobility provein genes - useful for treatment of endometriosis and proup protein genes - useful for treatment of endometriosis and provein genes - useful for treatment of endometriosis and provein for modulating vascularisation, etc.

PT tumours, or for modulating vascularisation, etc.

PS Claim 1; Fig 17; SBpp; German.

CV02880-V02898 are cDNA sequences that encode aberrant forms of the human child mobility group protein (HMG) gene, HMGI-C, which is located on chigh mobility group protein (HMG) gene, HMGI-C, which is located on chigh mobility group protein these protein binding domain. These proteins cantibodies derived from these proteins or expression modulators of the the translation product but not the proteins or expression modulators of the HMGI-C protein can be used in kits to modulate vascularisation and can improve vascular provision in myocardium damaged by infarction. Such proteins can also be used to treat endometriosis and tumours, for contraception (local or oral) and for tissue regeneration, especially in continues which are currently impossible or difficult to regenerate and the use of biological material with attendant risks of viral transmission and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      problem of proliferative arterial disease - using problems and treatment of proliferative arterial disease - using property of prolynucleotide(s), proteins and antibodies, e.g. to identify property inhibitors of RC-9 activity.

PS Claim 4; Page 19-20; 34pp; English.

RC-9 polynucleotides (T64806-09) correspond to partial, genomic and colMA sequences from rat, and human cDNA, respectively. The crat 424 bp partial genomic DNA fragment was isolated by differential display analysis of rat carotid arteries after balloon angioplasty and was used as a probe to isolate the genomic cangioplasty and was used as a probe to isolate the genomic canguence. RC-9 protein (see also W18513-14) is implicated in coronary arterial disease. RC-9 nucleic acids can be used in matches and coronary arterial disease. RC-9 nucleic acids can be used in coronary arterial disease. RC-9 nucleic and in the diagnosis and coronary arterial disease, and in the diagnosis and coronary arterial disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
The inventor relates to 70 novel genes and the secreted polypeptides they encode or by protein seguing to the pure to a human genes and treatment of e.g. cancers, neurological or disorders, immune diseases, inflammation or blood disorders

Claim 1; Page 170; 447pp; English.

This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. V34145) for increasing the stability of the fused protein as compared to the human protein only.

Compared to the human protein only.

The invention relates to 70 novel genes and their fragments (nucleic acid sequences: V34154-V34276; amino acid sequences W75057-W75179) which sequences: V34154-V34276; amino acid sequences W75057-W75179) which sequences: V34154-V34276; amino acid sequences w75057-W75179) which sequences by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypeptides, based on which tissues they are most highly expressed in (see V34154 for described conditions).

Claim 18; Page 9; 39pp; German.

DNA was extracted from horse liver, digested and fragments isolated to be cloned in lambda phages. These were packaged in E. coli and tested with a human GI probe. A 4.6 kb BamHI fragment, encoding the entire gene was cloned in pUC9 to form pAHI11. The introns were removed from the corresponding mRNA and the fragments spliced to give a product which can be converted to "copy DNA".

The product is useful as antiviral, antitumour and immunosuppressive
of most human genes
Example 4; Page 191; 500pp; English.
The Expressed Sequence Tag was isolated from a human brain cDNA
library as part of a large set of ESTs which can be used as markers
for human genes transcribed in vivo. They can be used to facilitate
tagging of most human genes, for mapping locations of expressed gene
                                                                                                           markers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           នននននន
                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences of given in T19001-T26837 and which is able to hybridise to part of thuman genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-and of mRNA by using poly(T) as the sole primer. Since the 3'-cuntranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types.

Sequence 450 BP; 111 A; 86 C; 110 G; 139 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

PR New polynucleotides encoding human secreted proteins - derived from
PT e.g. human blood, kidney, foetal lung, placenta, testes, brain,
PT e.g. human blood, kidney, foetal lung, placenta, testes, brain,
PT ovary, pituitary, retina and colon cDNA libraries

CC The present sequence represents an expressed sequence tag (EST), and is
CC The present sequence represents an expressed sequence tag (EST), and is
CC a polynucleotide of the invention. The polynucleotides of the invention
CC are all secreted EST sequences isolated from a variety of human tissue
CC sources. The EST sequences isolated from a variety of human tissue
CC contacting, preventing or ameliorating medical conditions in humans and
CC animals, although no supporting data is given. Suggested activitites
CC include nutritional activity, immune stimulating or suppressing activity,
CC and thrombolytic activity, chemotactic/bemokinetic activity, hammastatic
CC activity, cadherin/tumour invasion suppressor activity, tumour inhibition
CC activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ဌ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

control insect populations or for detecting odours e.g. alcohol, explosives, natural gas etc.
Claim 19; Fig 24; 195pp; English.
The sequences given in 029855-77 are odorant receptor clones derived from an insect, a vertebrate, a fish or a mammal. These clones form a family of neurotransmitters and hormone receptors which transduce intracellular signals by activation of specific G-proteins. Each of these receptors is a member of a superfamily of surface receptors which traverse the membrane seven times. These clones are only expressed in the olfactory epithelium. These clones were isolated using probes derived from RNA prepared from the olfactory epithelia of Sprague-Dawley rats. Isolated cDNA's were amplified using primers which correspond to transmembrane domain 2 and 7. PCR products of the

                                                                                                                                                              The present sequence encodes a secreted protein. The nucleic acid sequence is isolated from a human adult blood cDNA library using probe v63204. The polypeptide may have biological activities such has e.g. nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haemostatic activiny, inchemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, oadherin/tumour invasion suppressor activity, tumour inhibition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             appropriate size were isolated and sequenced. The deduced protein sequences of these CDNA's defined a new multigene family which shared sequence and structural properties with the superfamily of neurotransmitter and hormone receptors which traverse the membrane seven times. This novel family, however exhibits features different from any other member of the superfamily identified so far. There is striking divergence within the third, fourth and fifth transmembrane domains between the olfactory proteins. This divergence in the potential ligand binding domain is consistent with the idea that the family of molecules cloned is capable of associating with a large number of odorant of diverse molecular structure.

New polynucleotides encoding human secreted proteins - derived from e.g. human blood, kidney, foetal lung, placenta, testes, brain, ovary, pituitary, retina and colon cDNA libraries (Claim 1; Page 538; 641pp; English.

The present sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Nuclear hormone receptor interacting polypeptides, esp. thyroid hormone-interacting proteins (TRs) for identifying proteins useful in treatment and diagnosis of thyroid related disorders by inoculating thyroid hormone receptor activity Disclosure; Page 42-43; 105pp; English.

A number of TR-interacting proteins have been isolated and their CDNA's partially sequenced. S112a gene shows no homology to any known gene and is shown in this sequence. Nearly all the fusion CDNAs isolated showed very strong dependence on hormone activation. The proteins can be used in an in vivo trap system for the isolation of proteins which associate with any nuclear hormone receptor. The proteins and Abs may be used to treat or diagnose thyroid disorders, and to modulate thyroid hormone receptor activity.

Disclosure; Fig 4; 69pp; English.
The present sequence encodes thyroid hormone receptor-interacting protein S112a. The protein was identified using the method of the invention. The method is used to determine if a test protein is cat of interacting with a nuclear hormone receptor protein in a ligand-dependent manner. The method is used especially to screen for proteins that interact with thyroid hormone receptors in a ligand-dependent or ligand-sensitive manner.

Disclosure; Page 35; 49pp; English.
This is the nucleotide sequence of the ovary-specific transcription regulatory element from the PLE36 gene of tobacco. A claimed DNA construct comprises either an isopentenyl transferase (see W81575) or a tryptophan oxygenase (see W81575)-encoding sequence, operably linked to an ovary or developing fruit-specific plant-expressible promoter (see also V69755 and V69759). The construct is used to stably integrate enzymes involved in cytokinin or auxin biosynthesis into the plant genome to achieve a transgenic plant (preferably nor auximber or watermelon) producing seedless fruit in the
                                                                                                                                                                                                                                                           Sequence
IFNX 416.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12-NOV-1998.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              V69758;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             be used in the prodn. of recombinant gamma-interferon, a cytokine-like molecule. The owine cytokines will be useful in the intensive livestoci industries such as live animal export trade, feed-lots and intensive rearing industries, where animals are subjected to great environmental challenge with infectious diseases, partic. respiratory infections, and are more prone to immunodepressive effects. The cytokines may be used for treatment or prophylaxis to maintain, stimulate or enhance immuno-

New modified human beta interferon polypeptide(s) - prepd. by p1 plasmid transformed bacteria, with improved antiviral, p1 plasmid transformed bacteria, with improved antiviral, p2 p1 anti-proliferative and immune regulating actions

PT anti-proliferative and immune regulating actions

PS Claim 28; Chart 2a, page 32; 7lpp; English.

CC compared with interferon beta prepd. by recombinant methods, the cC compared with interferon beta prepd. by recombinant methods, the p5 claim 28; chart inversion are more active and have different affinities cC for cell surface receptors (allowing selective targetting); they cc for cell surface receptors (allowing selective targetting); they call the preparation of the prepara

Compared with interferon beta prepd. by recombinant methods, the Compared with interferon beta prepd. by recombinant methods, the INFS of the invention are more active and have different affinities for cell surface receptors (allowing selective targetting); they have higher therapeutic index; improved stability against microbial breakdown during synthesis; and better in vivo solubility and stability. They are also easier to recover from incubation mixts. Sequence 501 BP; 112 A; 31 C; 67 G; 80 T;

                                                    New modified human beta interferon polypeptide(s) - prepd. by plasmid transformed bacteria, with improved antiviral, anti-proliferative and immune regulating actions claim 28; Chart 2b, page 33; 71pp; English. Compared with interferon beta prepd. by recombinant methods, the Compared with interferon beta prepd. by recombinant methods, the INFS of the invention are more active and have different affinities for cell surface receptors (allowing selective targetting); they have higher therapeutic index; improved stability against microbial breakdown during synthesis; and better in vivo solubility and stability. They are also easier to recover from incubation mixts. sequence 501 Bp; 110 A; 32 C; 66 G; 81 T;

Compared with interferon beta prepd. by recombinant methods, the INFS of the invention are more active and have different affinities for cell surface receptors (allowing selective targetting); they have higher therapeutic index; improved stability against microbial breakdown during synthesis; and better in vivo solubility and stability. They are also easier to recover from incubation mixts. sequence 501 BP; 112 A; 30 C; 69 G; 85 T;

Compared with interferon beta prepd. by recombinant methods, the Compared with interferon beta prepd. by recombinant methods, the Tines of the invention are more active and have different affinities for cell surface receptors (allowing selective targetting); they have higher therapeutic index; improved stability against microbial breakdown during synthesis; and better in vivo solubility and stability. They are also easier to recover from incumation mixts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               have higher therapeutic index; improved stability against microbial breakdown during synthesis; and better in vivo solubility and stability. Compared with interferon beta prepd. by recombinant methods, the INFS of the invention are more active and have different affinities for cell surface receptors (allowing selective targetting); they have higher therapeutic index; improved stability against microbial breakdown during synthesis; and better in vivo solubility and stability. They are also easier to recover from incubation mixts. Sequence 501 BP; 110 A; 32 C; 66 G; 81 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New modified human beta interferon polypeptide(s) - prepd. by plasmid transformed bacteria, with improved antiviral, anti-proliferative and immune regulating actions Claim 28; Chart 2a, page 32; 71pp; English. Compared with interferon beta prepd. by recombinant methods, the INFS of the invention are more active and have different affinities for cell surface receptors (allowing selective targetting); they have higher therapeutic index; improved stability against microbial breakdown during synthesis; and better in vivo solubility and stability. They are also easier to recover from incubation mixts. Sequence 501 BP; 107 A; 31 C; 69 G; 80 T;

                                                                                                                                                                                                              New modified human beta interferon polypeptide(s) - prepd. by plasmid transformed bacteria, with improved antiviral, anti-proliferative and immune regulating actions Claim 28; Chart 2c, page 34; 71pp; English. Compared with interferon beta prepd. by recombinant methods, the INFS of the invention are more active and have different affinities for cell surface receptors (allowing selective targetting); they have higher therapeutic index; improved stability against microbial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New modified human beta interferon polypeptide(s) - prepd. by plasmid transformed bacteria, with improved antiviral, anti-proliferative and immune regulating actions claim 28; Chart 2e, page 36; 71pp; English.

Compared with interferon beta prepd. by recombinant methods, the INFS of the invention are more active and have different affinities for cell surface receptors (allowing selective targetting); they have higher therapeutic index; improved stability against microbial breakdown during synthesis; and better in vivo solubility and stability. They are also easier to recover from incubation mixts. Sequence 501 Bp; 112 A; 31 C; 67 G; 80 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Key
                                                                                                                                             breakdown during synthesis; and better in vivo solubility stability. They are also easier to recover from incubatic sequence 501 BP; 112 A; 30 C; 69 G; 85 T;

Transforming growth factor-beta-receptor type II gene - useful for growth inhibition of cancer cells

Claim 2; Page 9; 12pp; Japanese.

T27596 is a cDNA sequence encoding the signal sequence and cytoplasmic domain of human transforming growth factor-beta (TGF-beta) receptor type II. The sequence was isolated from hepatoma cell line HepG2, and used as a probe for the isolation of the full coding sequence. The TGF-beta receptor is useful for inhibiting the growth of cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New modified human beta interferon polypeptide(s) - prepd. by plasmid transformed bacteria, with improved antiviral, anti-proliferative and immune regulating actions claim 28; Chart 2d, page 35; 71pp; English.

Compared with interferon beta prepd. by recombinant methods, the INFS of the invention are more active and have different affinities for cell surface receptors (allowing selective targetting); they have higher therapeutic index; improved stability against microbial breakdown during synthesis; and better in vivo solubility and stability. They are also easier to recover from incubation mixts. Sequence 501 BP; 108 A; 31 C; 70 G; 81 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  11-DEC-1985.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein genes - useful for frequent of encometrics and tumours, or for modulating various that encode aberrant forms of the human v02880-v02898 are cDNA sequences that encode aberrant forms of the human chiph mobility group protein (HMG) gene, HMGI-C, which is located on high mobility group protein (HMG) gene, HMGI-C, which is located on chromosome 12. These sequences encode the DNA binding part of the translation product but not the protein binding domain. These proteins, antibodies derived from these proteins or expression modulators of the HMGI-C protein can be used in kits to modulate vascular development. Such kits can reduce, block or stimulate angiogenesis or vascularisation and can improve vascular provision in myocardium damaged by infarction. Such proteins can also be used to treat endometriosis and tumours, for contraception (local or oral) and for tissue regeneration, especially in degenerating or damaged tissue. The regeneration method can be applied to use of biological material with attendant risks of viral transmission and canaphylactic shock, is avoided.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    double-stranded DNA) which comprises one of the 7837 "GS" sequences of given in T19001-T26837 and which is able to hybridise to part of thuman genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3 directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-
cuntranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types.

                                                                                                                                                              A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                      12.NOV-1998.

PT New polynucleotides encoding human secreted proteins - derived from PT e.g. human blood, kidney, foetal lung, placenta, testes, brain, PT ovary, pituitary, retina and colon cDNA libraries
PT ovary, pituitary, regulate and colon cDNA libraries
PT ovary, pituitary, respective and sequence tag (EST), and is
CC a polynucleotide of the invention The polynucleotides of the invention
CC are all secreted EST sequences isolated from a variety of human tissue
CC sources. The EST sequences and proteins encoded by them are predicted to
CC cand useful biological activities which would make them suitable for
CC candinals, although no supporting data is given. Suggested activities
CC include nutritional activity, immune stimulating or suppressing activity,
CC haematopolesis regulating activity, tissue growth activity, haemostatic
CC and thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC activity, cadharin/tumour invasion suppressor activity, tumour inhibition
CC activity. The EST sequences are also stated to be useful for gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        transglutaminase sequence and was isolated from a lambda-gtll human prostate tissue cDNA library using primers ZC4127 and ZC4129. This was done as part of the generation of a full-length human prostate transglutaminase cDNA clone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EST clone EP234.

                                                                                                                                                                                                    This sequence includes the sequence of claim 1 (bases 319-477) modified by restriction sites for coupling to the beta-lactamase gene and insertion into plasmids. Beta-urogastrone can then easily recovered from the fusion protein expressed by transformants. The fusion protein is less easily degraded by proteases and so protects beta-urogastrone and beta-lactamase collects in the periplasm of E.coli. It is therefore easy to collect and purify the product. Beta-urogastrone is the hormone of the salvary glands which supresses stomach acid secretion and promotes cell growth, so is useful for treating ulcers and wounds. Previously the product was obtd. only in small amts, from human urine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beta-urogastrone - beta-lactamase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence encodes a Streptococcus pneumoniae protein of unknown control of function, and represents a DNA sequence of the invention.

The DNA sequences were isolated from Streptococcus pneumoniae strain colony (NCIMB 40794). The Streptococcus pneumoniae proteins of the invention can be used to identify compounds which interact with and chivention can be used to identify compounds which interact with and control of the proteins. Antagonists can be used to treat diseases caused by S. pneumoniae proteins, through genetic in a mammal by inoculation with the S. pneumoniae proteins or delivery of the encoding nucleic acids in a vector adequate to produce antibody and/or T cell immune responses to protect the animal from disease. The croteins can also be used to identify antimicrobial compounds which are capable of inhibiting their bloactivity. In particular the proteins of the invention can be used to prevent adhesion of bacteria to mammalian cell invescillular matrix proteins on in-dwelling devices or in wounds, to block protein-mediated mammalian cell invasion, and to block the normal implantation of in-dwelling devices or their than by the implantation of in-dwelling devices or other surgical techniques.

Human breast tumour specific polypeptides and nucleotide sequences, and the vectors containing the DNAs, are also useful in vaccines for inhibiting development (for prevention or therapy) of breast cancer. The polypeptides may also be used to raise monoclonal antibodies, used as immunoassay reagents. Sequence 547 BP; 154 A; 142 C; 91 G; 159 T;

A computer readable medium has been developed which has recorded on it properties of the computer readable medium has been developed which has recorded on it nucleotide sequences isolated from the Enterococcus faecalis genome. X1293 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

Claim 2; Pages 187-188; 333pp; English.

This sequence encodes a Streptococcus pneumoniae protein of unknown function. The invention provides DNA sequences (V65201 to V65304) from the Streptococcus pneumoniae genome and corresponding protein sequences (W80605 to W80728). A recombinant host containing a vector comprising any of the above nucleic acids can be used for the recombinant expression of the protein sequences. The invention also provides a DNA chip having arrayed on it at least 15 base pair fragment of any one or more of these DNA sequences. The DNA chip can be used methods for evaluating gene expression in S. pneumoniae and for identifying viruience genes in
                                                                                                                                                                                                                                                                                                                                                                                                                                   (ELIL) LILLY & CO ELI.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ន្តន្តន្ត
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PT New polynucleotides encoding human secreted proteins - derived from PT e.g. human blood, kidney, foetal lung, placenta, testes, brain, presents, retina and colon cDNA libraries
PT ovary, pituitary, retina and colon cDNA libraries
PT ovary, pituitary, retina and colon cDNA libraries
PS Claim 1; Page 264; 641pp; English.

CC an polynucleotide of the invention. The polynucleotides of the invention of the present sequences isolated from a variety of human tissue of are all secreted EST sequences and proteins encoded by them are predicted to are useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and continuals, although no supporting data is given. Suggested activities conclude nutritional activity, immune stimulating or suppressing activity, haemostatic conditions in humans and the mematopolesis regulating activity, tissue growth activity, haemostatic activity, cadherin/tumour invasion suppressor activity, tumour inhibition contivity, cadherin/tumour invasion suppressor activity, tumour inhibition contivity, cadherin/tumour invasion suppressor activity, tumour inhibition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

Antibodies that selectively bind to the above peptide fragments can be used to treat s. pneumoniae infection antibodies can also be used to detect s. pneumoniae calls. sequence 582 BP; 171 A; 98 C; 148 G; 165 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (GEMY ) GENETICS INST INC.

Assays for bone
BMP type I recep
                           Disciosure; Page 79-80; 101pp; English.

A cDNA clone (T28030) codes for mouse incomplete bone morphogenetic protein (BMP) type II receptor kinase protein 3 (BRK-3) (R95234), corresponding to the extracellular, transmembrane and intracellular juxtamembrane region of full length BRK-3 (R95224). Host cells co-transfected with vectors carrying full-length, incomplete or soluble BRK-3 cDNA and full-length, incomplete or soluble BRF type I receptor kinase protein CDNA (see also T28018-29) express a BMP receptor complex useful for screening cpds. for BMP receptor affinity or for determining the concentration of a BMP receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents the 5' nucleotide sequence of the c AS186.3. This clone is a full length clone, isolated from a human f kidney cDNA library, using methods which are selective for cDNAs encoding secreted proteins. The products of clone AS186.3 may as tissue/molecular weight markers, for chromosome identification, to identify possible genetic disorders, and to isolate new related They can also be used for nutritional uses, cytokine and cell proliferation, cell differentiation activity, immune stimulating or suppressing activity, haematopolesis regulating activity, thisbin activity, chemotactic/chemokinetic activity haematory activity, through the property activity activity, the constant activity, activity, the activity, receptor/ligand activity, anti-inflammatory activity, thmour inhibition activity or other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            31-DEC-1996 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SO
                                                                                                                                                                                                                                                                                                                                                 PT New polynucleotides encoding human secreted proteins - derived from PT e.g. human blood, kidney, foetal lung, placenta, testes, brain, provary, pitultary, retina and colon cDNA libraries.

PS Claim 1: Page 397; 618pp; English.

CC The present sequence represents a human expressed sequence tag (EST).

CC The present sequence represents a human expressed sequence tag (EST).

CC The polynucleotide, which is a secreted EST, and the encoded protein creating preventing or ameliorating medical human sand animals, although no supporting data is conditions in humans and animals, although no supporting data is CC given. Suggested activities include nutritional activity, immune cstimulating or suppressing activity, haematopolesis regulating cativity, tissue growth activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.

ATM gene; ataxia-telanglectasia; progressive genetic disorder; antibody; central nervous system; immune system; chromosomal instability; therapy; cancer predisposition; radiation sensitivity; cell cycle abnormality; multi-system disease; autosomal recessive; cerebellar ataxia; cerebellum; general motor dysfunction; Purkinje cell; oculocutaneous telanglectasia; ceresel; bulbar conjunctiva; facial skin; A-T; ss.
                  New isolated ataxia-telangiectasia gene - used to develop prods. for the study, diagnosis and treatment of ataxia-telangiectasia.

Claim 1; Page 60; 153pp; English.

743444-T43496 represent exons of the ATM gene of the invention.

Ataxia-telangiectasia (A-T) is caused by mutations, insertions, or deletions in the coding region of the ATM gene. A-T is a progressive genetic disorder affecting the central nervous and immune systems. A involves chromosomal instability, cancer predisposition, radiation involves chromosomal instability, cancer predisposition.
                                                                                                                                                                                                                          (KOHN/) KOHN K I.

Q99370 encodes the rat allograft inflammatory factor, AIF-1. The AIF-1 gene is a differentially expressed allograft gene which is expressed in allograft tissue during transplant rejection. Identification of the rat AIF-1 product (R80521) or transcript indicates that allograft rejection is taking place. The rat AIF-1 gand product are therefore useful in the diagnosis of transplant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     exon

Cerebellar ataxia that gradually develops into general motor dysfunction is the first clinical hallmark of A-T, and results from progressive loss of purkinje cells in the cerebellum. Oculocutaneous telanglectasia (dilation of blood vessels) develops in the bulbar conjunctiva and facial skin, and is later accompanied by graying of the hair and atrophic changes in the skin. The co-occurrence of cerebellar ataxia and telangiectases in the conjunctivae and occasionally on the facial skin (the second early hallmark of A-T) usually establishes the differential diagnosis of A-T from other cerebellar ataxias. The ATM gene, can be used in methods for detecting carriers of a defective gene that causes A-T. The gene can also be used to generate antibodies. The antibodies and methods can be used in the study, diagnosis and therapy of A-T. Sequence 637 BP; 231 A; 88 C; 124 G; 194 T;

A vaccine comprising an immunogenic fragment of the HA2 subunit of the influenza haemagglutinin (HA) protein from type A subtype IV and type B IV may be used for stimulating protection in animals against injection with influenza virus. The vaccine confers multi-strain immunity against strains IV A and IV B. The vaccines may be recombinantly produced, optionally as fusion proteins. Sequence 666 BP; 224 A; 118 C; 166 G; 158 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           vaccines against multi strain influenza virus infection - protect against influenza A and B against influenza A and B Disclosure; Page 54-55; 151pp; English.

A vaccine comprising an immunogenic fragment of the HA2 subunit of the influenza haemagilutinin (HA) protectin from type A subtype IV and type B IV may be used for stimulating protection in animals against injection with influenza virus. The vaccine confers multi-strain immunity against strains IV A and IV B. The vaccines may be recombinantly produced, optionally as fusion protectins.
